

The Colorado PERA Alternative Investments portfolio had an annualized net internal rate of return (IRR) of 10.41 percent since inception through December 31, 2010.

Colorado PERA uses dollar-weighted IRRs to measure portfolio performance for Alternatives, as recommended by the CFA Institute.

The limited partnership recordkeeping, including the IRR, is maintained internally by Colorado PERA for each limited partnership. The Colorado PERA IRR calculation method may differ from calculation methods used by the General Partners or other Limited Partners.

Differences in IRR calculations can be affected by cash-flow timing, the accounting treatment of carried interest, partnership management fees, advisory fees, organization fees, other partnership expenses, sale of distributed stock, and valuations. Importantly, there is no industry-standardized method for valuation or reporting, which makes comparisons of these numbers difficult.

Additionally, the purchase or sale of secondary interests makes for unique comparison problems due to the specific pricing and timing characteristics of the transaction when contrasted with the Limited Partners Investment.

Until a partnership is liquidated, typically over 10 to 12 years, the IRR is only an interim estimated return. The IRR calculated in the early years of a partnership is not meaningful given the J-curve effect. The actual IRR performance of any limited partnership is not known until all capital contributed and earnings have been distributed to the investor.

Finally, please note that none of the information contained herein has been reviewed or approved by the General Partners of the funds.

Alternative Investments Key Terms

Capital Contributed: The amount of capital that has been paid into a partnership to date. Typically, partnerships call capital on a “just-in-time” basis as investment opportunities arise. Capital Contributed may exceed Capital Committed when partnerships are allowed to recycle capital or if fees are accounted for outside an investor’s commitment.

Capital Distributed: The amount of Contributed Capital and profits that have been returned to investors to date. This does not represent remaining net asset value in a partnership.

Fund of Funds: A single investment partnership that makes a series of commitments to other limited partnerships.

IRR (Internal Rate of Return): The discount rate that equates the net present value (NPV) of an investment’s cash inflows with its cash outflows. This is also known as the dollar-weighted rate of return.

J-Curve Effect: The curve realized by plotting the returns generated by a private equity fund against time (from inception to termination). Payment of fees and start-up costs in the early years of a partnership, prior to any returns to the investor, may cause capital invested to be higher than the book value of the investment. As a result, a private equity fund could initially show negative returns until realizations or capital appreciation occurs, which will cause the fund’s return to start to rise. In the final stages of a partnership, the interim IRR will give a reasonable indication of the definitive IRR. This period is generally shorter for buyout funds than for early-stage and expansion funds.

Vintage Year: The year in which Colorado PERA receives its first capital call for a particular investment.

¹ Fund of Funds

² As a result of Senate Bill 09-282, DPSRS assets were transferred to PERA on January 1, 2010; performance data begins January 1, 2010

³ Not Meaningful

The limited partnership recordkeeping, including the internal rate of return or IRR, is maintained internally by Colorado PERA for each limited partnership. The Colorado PERA IRR calculation method may differ from calculation methods used by the General Partners or other Limited Partners.

Differences in IRR calculations can be affected by cash-flow timing, the accounting treatment of carried interest, partnership management fees, advisory fees, organization fees, other partnership expenses, sale of distributed stock, and valuations. Importantly, there is no industry-standardized method for valuation or reporting, which makes comparisons of these numbers difficult.

Additionally, the purchase of secondary interests makes for unique comparison problems due to the specific pricing and timing characteristics of the transaction when contrasted with the Limited Partners Investment.

Until a partnership is liquidated, typically over 10 to 12 years, the IRR is only an interim estimated return. The IRR calculated in the early years of a partnership is not meaningful given the J-curve effect. The actual IRR performance of any limited partnership is not known until all capital contributed and earnings have been distributed to the investor.

Please note that none of the information contained herein has been reviewed or approved by the General Partners of the funds.
